

First MainStreet Insurance

Pre-Renewal Campaign – Outbox Review

This document provides a summary of the Outbox review conducted with the testing audience, in preparation for both the beta and final launch.

Data Validation:

Joshua Connell:

- Account correctly triggered 2 email subscriptions (one per policy branch)
- System working as intended: identifies separate branches as distinct subscriptions
- Both policies meet campaign audience conditions
- Expected send dates: July 22, 2026 and June 30, 2027 (based on 91-day calculation from renewal dates)

Sheila Counle:

- Account tagged for campaign but did not send
- Root cause: Missing primary email address in Epic data
- System correctly excluded account (not a failure—proper data validation)

Testing & Verification

- Kaleb tested 24 accounts total
- Some duplicate entries identified and filtered out
- Edge cases successfully identified

Sender & Branding:

- Emails have correct branding and sender information
- First MainStreet Insurance (info@firstmainstreet.com) has been added as the fallback sender and default user.
- This is due to missing servicing role data at policy level in Epic which is being investigated as a high priority.

Next Steps:

- Confirmed Monday, July 27th as final launch decision
 - Thursday, Friday, Monday for additional testing
- Standardized Testing Checklist
 - AR will develop formal checklist for future campaign verification
 - Items to check: policy selection, send dates, sender identity, branding
