

Pre-Renewal: Campaign Check List

First MainStreet Insurance

Monday 7/20: Action Items

- ☒ ~~Get 10 test accounts from Kaleb~~
- ☒ ~~AR will tag accounts and add to segments for the beta campaigns~~
- ☒ ~~Confirm fallback user strategy~~
 - ☒ ~~FMSI will discuss an info@ email address for their default user. They will work on this.~~
- ☒ ~~Confirm all segments are properly configured and ready for launch~~

Email Sending Setup

Email Sender Hierarchy

Emails are being sent from the Epic Policy Servicing Roles with the following hierarchy:

- RMA
- RMP
- PAM
- Default user (if all above are blank)

Default User Status

Laura Rose was originally selected as the default user but has been disabled, preventing her selection.

Current Solution: Kaleb has been selected as the temporary default user.

A support ticket has been created for the engineering fix. If the update is taking too long, we may request that Laura Rose's user be enabled temporarily (at least until engineering completes the work) to allow her to be set as the fallback for launch.

Campaign Updates & Technical Adjustments

Segment Configuration Changes

Based on FMSI's test case reviews, the beta campaigns have been updated with improved targeting to better reach their intended audience. The following segment adjustments apply to all 3 campaigns and reflect their specific policy-targeting criteria:

Account-Level Conditions (Only):

- Email address
- Tiers

Policy-Level Conditions (All Others):

- Status (specifically: Policy > Is Active > is True)
- Branches
- Producer exclusion
- Policy types

Anchor Date Configuration

All anchor dates have been updated from Expiration Date to Next Renewal Date to align with FMSI's pre-renewal campaign strategy.

IMPORTANT: Anchor Date Selection

DO NOT click on the anchor date selector in the campaigns to review the current selection.

Technical Issue: When you select "Policy > Next Renewal Date" as the anchor date, the system automatically sets the subscriber context to "one per Policy." This is built-in functionality designed to ensure the subscriber context matches the anchor date being used.

The Problem for FMSI: FMSI uses a custom "Policy Location" context that was built specifically for them. No other clients have this. If the context is set to "Policy Location" and then you click on the anchor date selector to choose "Policy > Next Renewal Date," the system will automatically revert the context from "Policy Location" back to just "Policy." This breaks FMSI's configuration.

Current Status: Commercial and Farm campaigns are correctly configured. Personal campaigns will be correctly configured soon.

Action Required: If you accidentally click on the anchor date selector and it reverts, we can change it back to "Policy Location," but please be cautious. Do a final check on all subscriber contexts right before launching to ensure they are set correctly.

Internal Email Configuration

Following the test case reviews and campaign updates, the internal email configuration has been finalized. The internal email for all 3 campaigns (form response notification email) will be sent from one of FMSI's own email addresses. This reflects a system-wide change:

Previously: All internal emails sent from `system@notify.agencyrevolution.com`

Now: Internal emails initially set up to send from the client's default email sender per location (customizable by the client)

For FMSI: First MainStreet Insurance <`fmsi@firstmainstreet.com`>
